

**\*\*PROCEDURE REPORT\*\***

**\*\*PATIENT ID:\*\*** PID004

**\*\*DATE OF PROCEDURE:\*\*** 21-Mar-2025

**\*\*PROCEDURE:\*\*** Left Heart Catheterization with Coronary Angiography and Stent Placement.

**\*\*CARDIOLOGIST:\*\*** Dr. Priya Singh, MD

**\*\*FINDINGS:\*\*** Coronary angiography revealed severe, high-grade stenosis (approximately 90%) in the left anterior descending (LAD) artery. The other vessels showed mild plaque buildup but no significant blockages.

**\*\*INTERVENTION:\*\*** A successful percutaneous coronary intervention (PCI) was performed. One drug-eluting stent was deployed in the LAD artery, restoring normal blood flow. The procedure was well-tolerated by the patient.

**\*\*IMPRESSION:\*\*** Successful stenting of a critical LAD stenosis. The patient's chest pain has resolved. He will be started on dual antiplatelet therapy (Aspirin and Clopidogrel) and a high-intensity statin.

**\*\*PLAN:\*\*** Monitor overnight and discharge in a stable condition with cardiac rehabilitation referral.
